

Silent P.A.

Wireless Audio Broadcast System

Have you ever tried to use a PA system in a place with strict sound restrictions? Or want to do a voice presentation to a group of people in a place with loud background noise? Now you can speak or perform to an unlimited number of people and be heard loud and clear, without disturbing others, with VocoPro's new wireless audio broadcast system, the SilentPA™.

The SilentPA™ allows up to 16 transmitters to broadcast, each on a unique frequency, to an unlimited number of receivers; the listeners can then tune into the program they wish to listen to. This could be different bands performing simultaneously in the same hall, a House Of Worship broadcasting their sermon in different languages or a backyard concert in a crowded neighborhood. The SilentPA™ has an untold number of applications.

The SilentPA™ is available in packages suited for various applications, or you can construct your own package by choosing a transmitter and as many receivers as your situation requires. Let the SilentPA™ change the way you play and perform.
